

Stratis blockchain in Automotive

Gluon - creating an intelligent connected automotive marketplace

Gluon's platform establishes an interconnected network of vehicles, interprets it for users, enables owners to act on their data and businesses to tailor offerings for specific groups.

Gluon & Stratis

- ✓ Gluon's data requirements evolve rapidly & their ecosystem is set to grow
- ✓ Flexibility is key, both to adapt & to deliver the necessary performance
- ✓ The architecture of Stratis, featuring configurable sidechains, consensus options & leveraging Microsoft's development tools provide the future-proofing Gluon requires

Why Stratis for Gluon?

Gluon is all about collaboration between partners - individuals, auto manufacturers and suppliers of products & services. The decentralized nature of blockchain facilitates exactly those kinds of relationships and the enterprise orientation of Stratis made it a great fit from the start.

Stratis blockchain for a growing ecosystem

- ✓ Written in C#/.NET and easily deployable in the cloud, Gluon was confident that integrating Stratis would be straightforward, as their ecosystem grows
- ✓ Stratis sidechains and consensus options ensure Stratis can be tuned to deliver flexibility & performance as Gluon's requirements evolve
- ✓ Stratis' enterprise orientation made it a great fit from the outset

Smart Contracts to execute Gluon innovation

- ✓ Gluon is constantly extracting new insights from its interconnected network, so it needs to develop new smart contracts using a familiar environment.
- ✓ Gluon requires high performance smart contracts, which Stratis' solution provides by running smart contracts on sidechains where they do not suffer mainchain 'bloat'
- ✓ Gluon needs to validate the smart contracts behind ancillary applications, and Stratis' unique whitelisting functionality enables this review process

Delivering the tokenomics to sustain the ecosystem

- ✓ Gluon is creating a token to fuel the marketplace driven by data from connected vehicles
- ✓ In addition to the STRAT token native to the Stratis public blockchain, project-specific tokens can also be created like the one Gluon requires
- ✓ Gluon will also be enabling developers to create ancillary applications to run on the platform, extending its appeal

"Gluon is all about seamless connectivity. Stratis has been developed from the ground up in C#/.NET & is easily deployable within the cloud, which allows Gluon to seamlessly integrate the Stratis platform into our existing infrastructure."

Sameer Mission,
Gluon CEO
