

Trade Payments on Stratis blockchain

A real example of Stratis Smart Contracts implementing 'Rules for Money', delivering process optimization to automate legal compliance

In the construction business, time is money.

In many countries legislation requires a mechanism to determine when payments become due and to mandate prompt payment.

Wildara's smart contract

- ✓ Simplifies the payment process
- ✓ Generates the necessary immutable record
- ✓ Provides the transparency that fosters trust
- ✓ Implements 'rules for money' that assure protection for both parties to the payment

Working with legislation, not around it or against it

'Rules for Money'

Wildara are an ISO9001 certified consultancy providing project management services for major construction programs. They recognised that smart contracts would map well to existing Australian legislation surrounding trade payments in the construction industry. Wildara worked with Stratis to conduct a trial of trade payments on the blockchain for their clients.

Implications of the Security of Payment Act

- ✓ The Security of Payment Act is Australian legislation designed to protect against construction industry insolvency
- ✓ Gives contractors a legal right to progress payments for work done
- ✓ Provides for:
 - ✓ Short maximum payment terms
 - ✓ Minimum interest rates
 - ✓ Dispute resolution flow

How do Smart Contracts on the Stratis blockchain help?

- ✓ Smart Contracts are a feature of an enterprise blockchain like Stratis
- ✓ Smart Contracts use the decentralization inherent in a blockchain to enable business logic to run automatically in distributed applications (DApps)
- ✓ Stratis Smart contracts have been designed with security & performance features built-in for enterprise deployment

Stratis' unique architecture ensures fast, secure execution

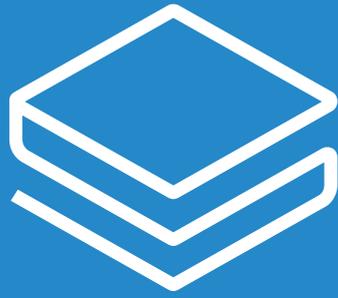

- ✓ Stratis Smart Contracts are written in the Microsoft C# .NET environment familiar to enterprise teams
- ✓ Stratis Smart Contracts execute on Stratis sidechains for security, performance and privacy, where required
- ✓ Sidechain performance can be optimized for the business logic running on your Smart Contracts

... 'Rules for Money'

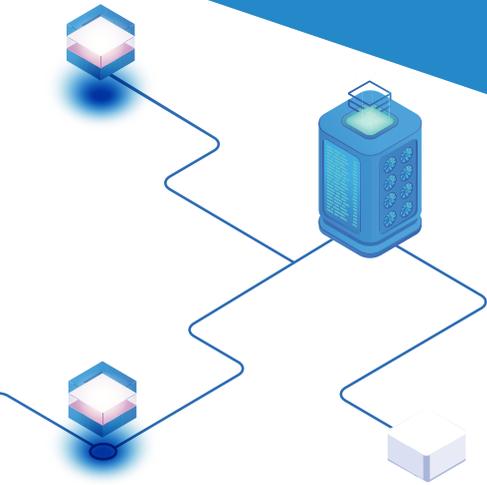

"Clients choose Wildara for our energy and innovation - the blockchain-based 'Rules for Money' solution we have built with Stratis is a novel approach that ensures the Security of Payment Act here in Australia is a catalyst for collaboration and not a liability for everyone to manage"

Peter Bowden,
Wildara Director
